How to try? 

How

do

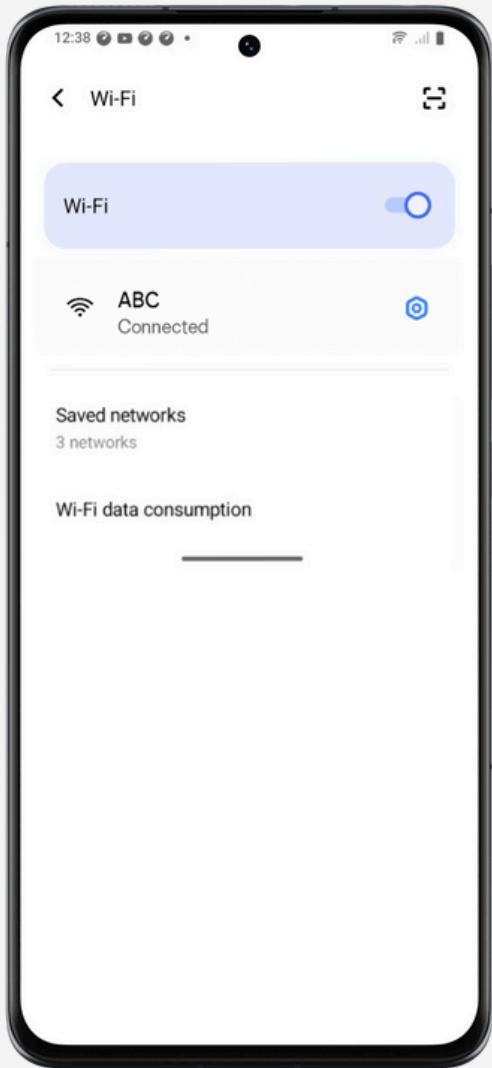

I

try

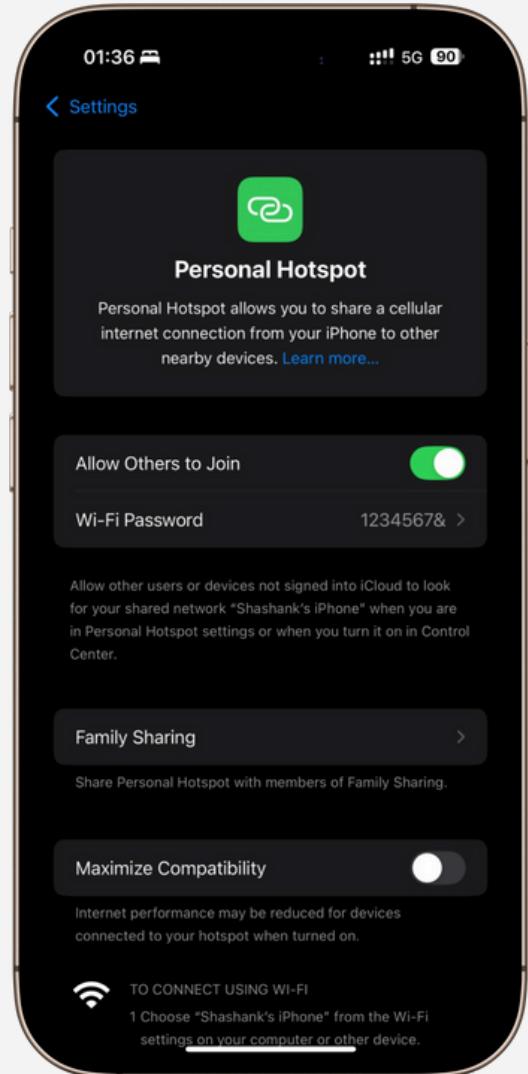

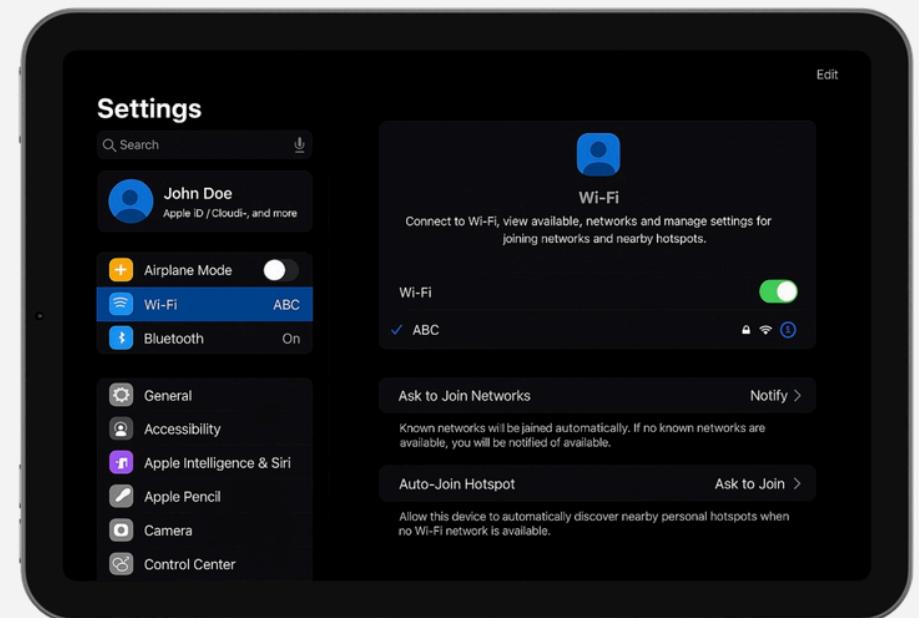

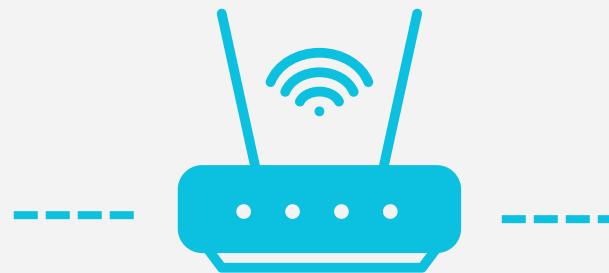

it?

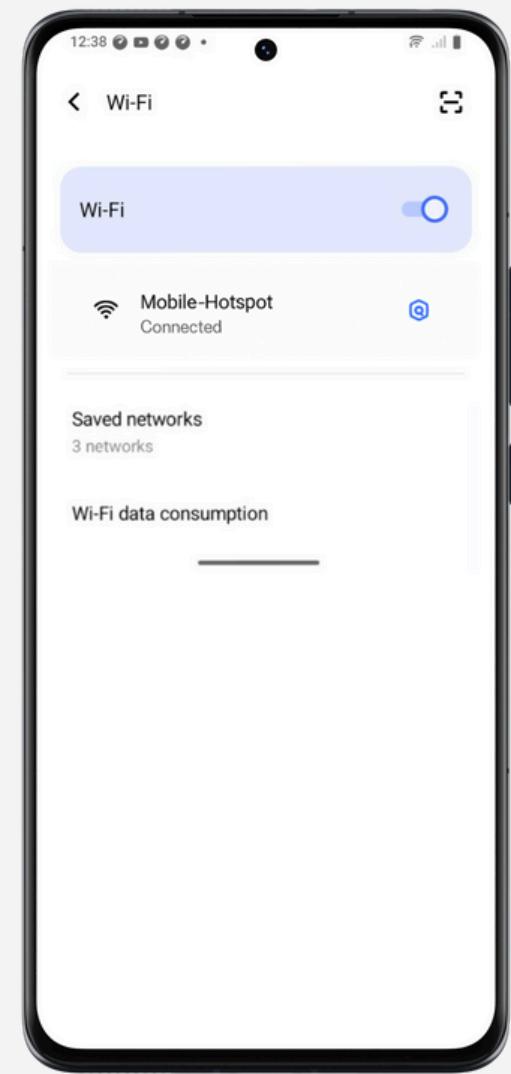

# Make sure all your devices are on the same network

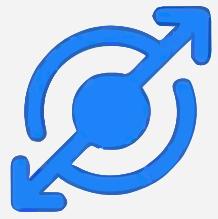

## Same Network / WiFi Router

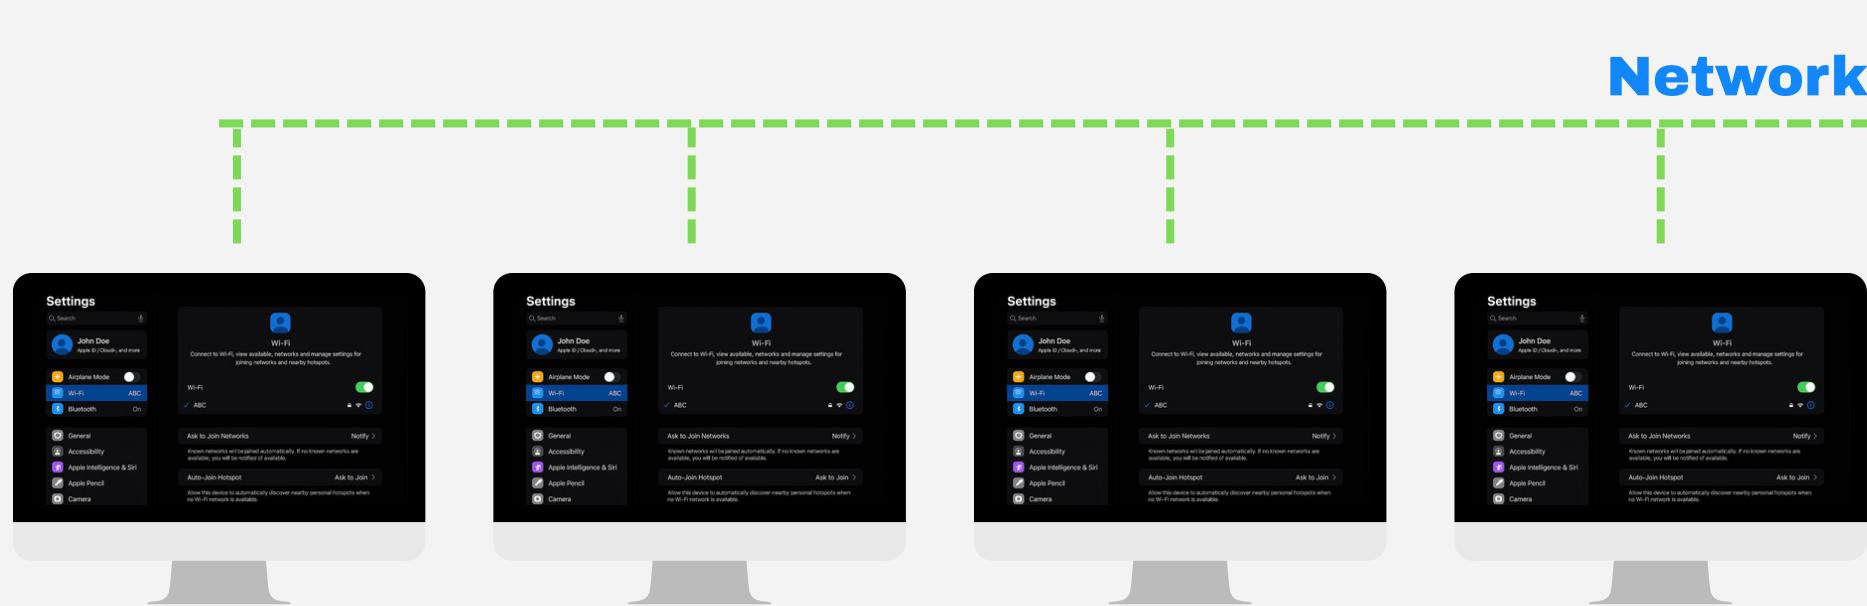

## Hotspot

Multiple connections

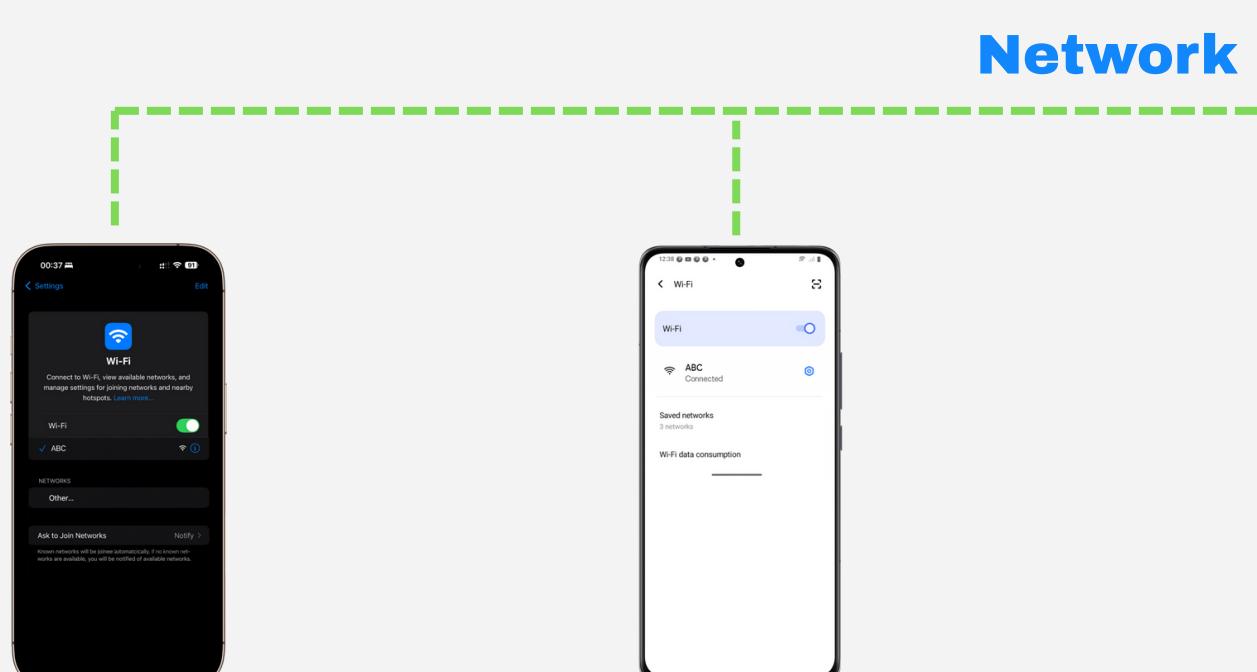

# Any device, any number—just connect them to any one network

SAME  
DEVICES

MIX  
DEVICES

MIN  
TWO  
DEVICES

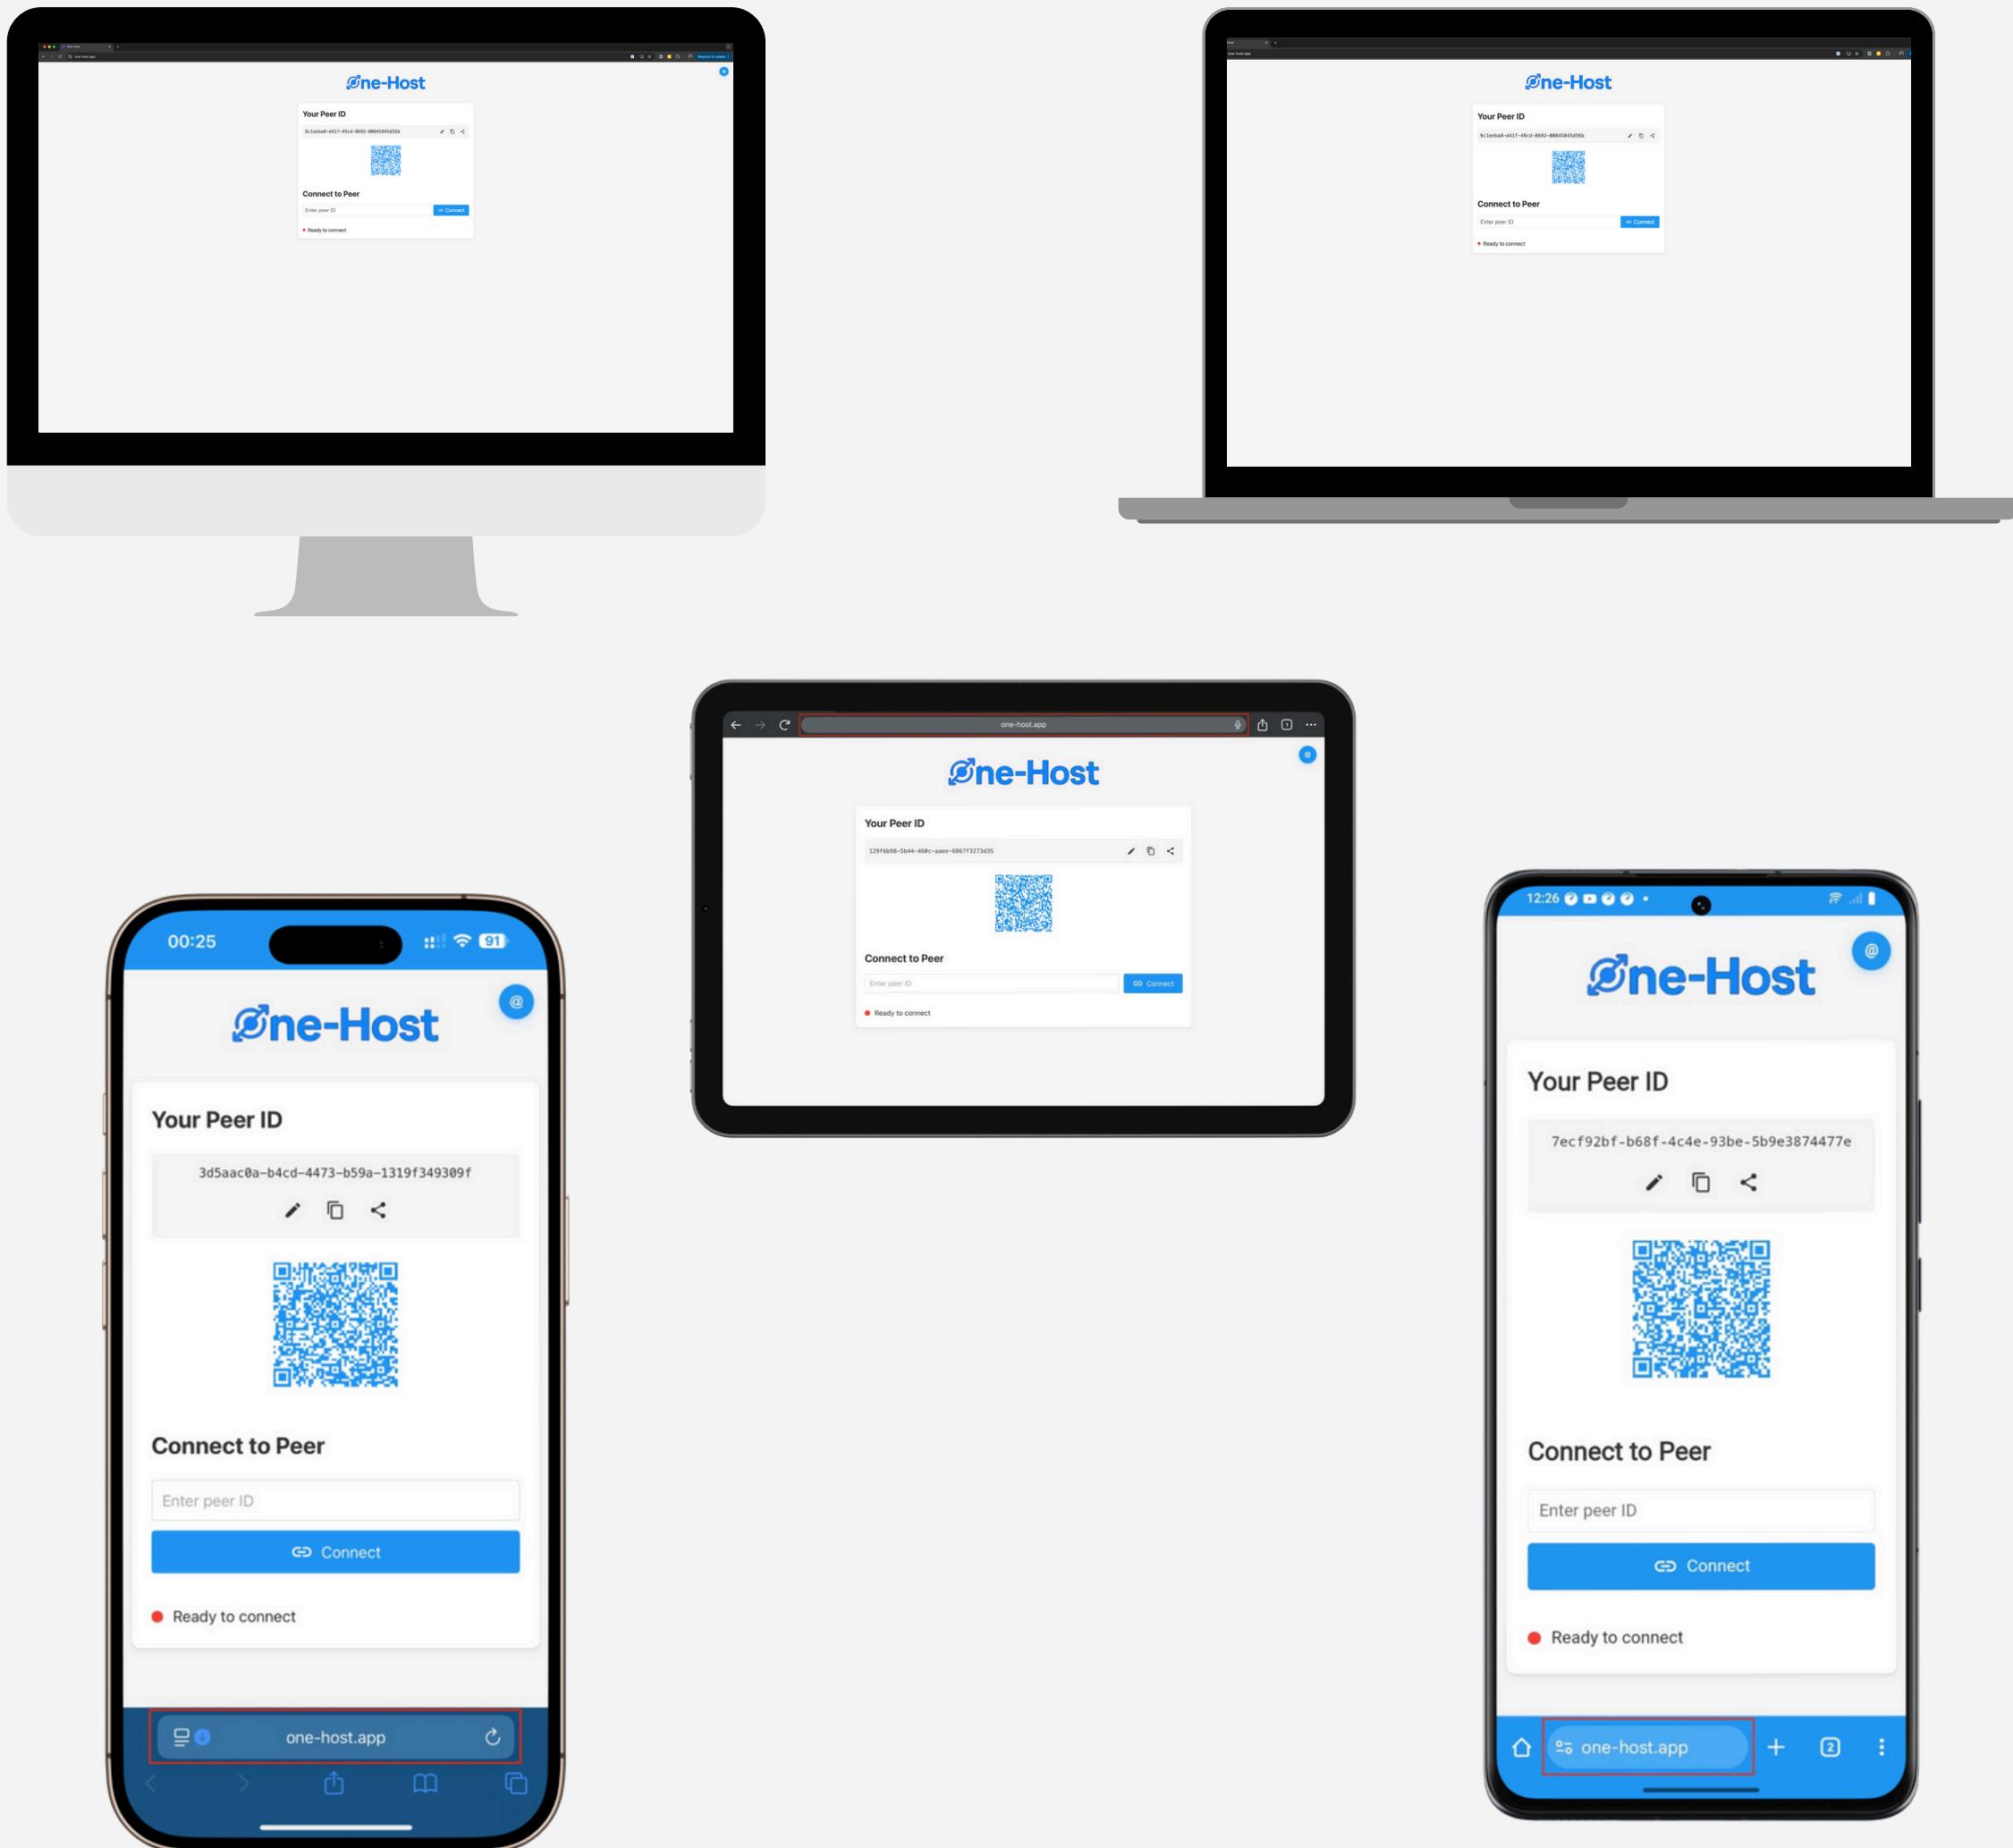

Access

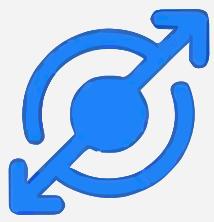

# Supports any modern browser

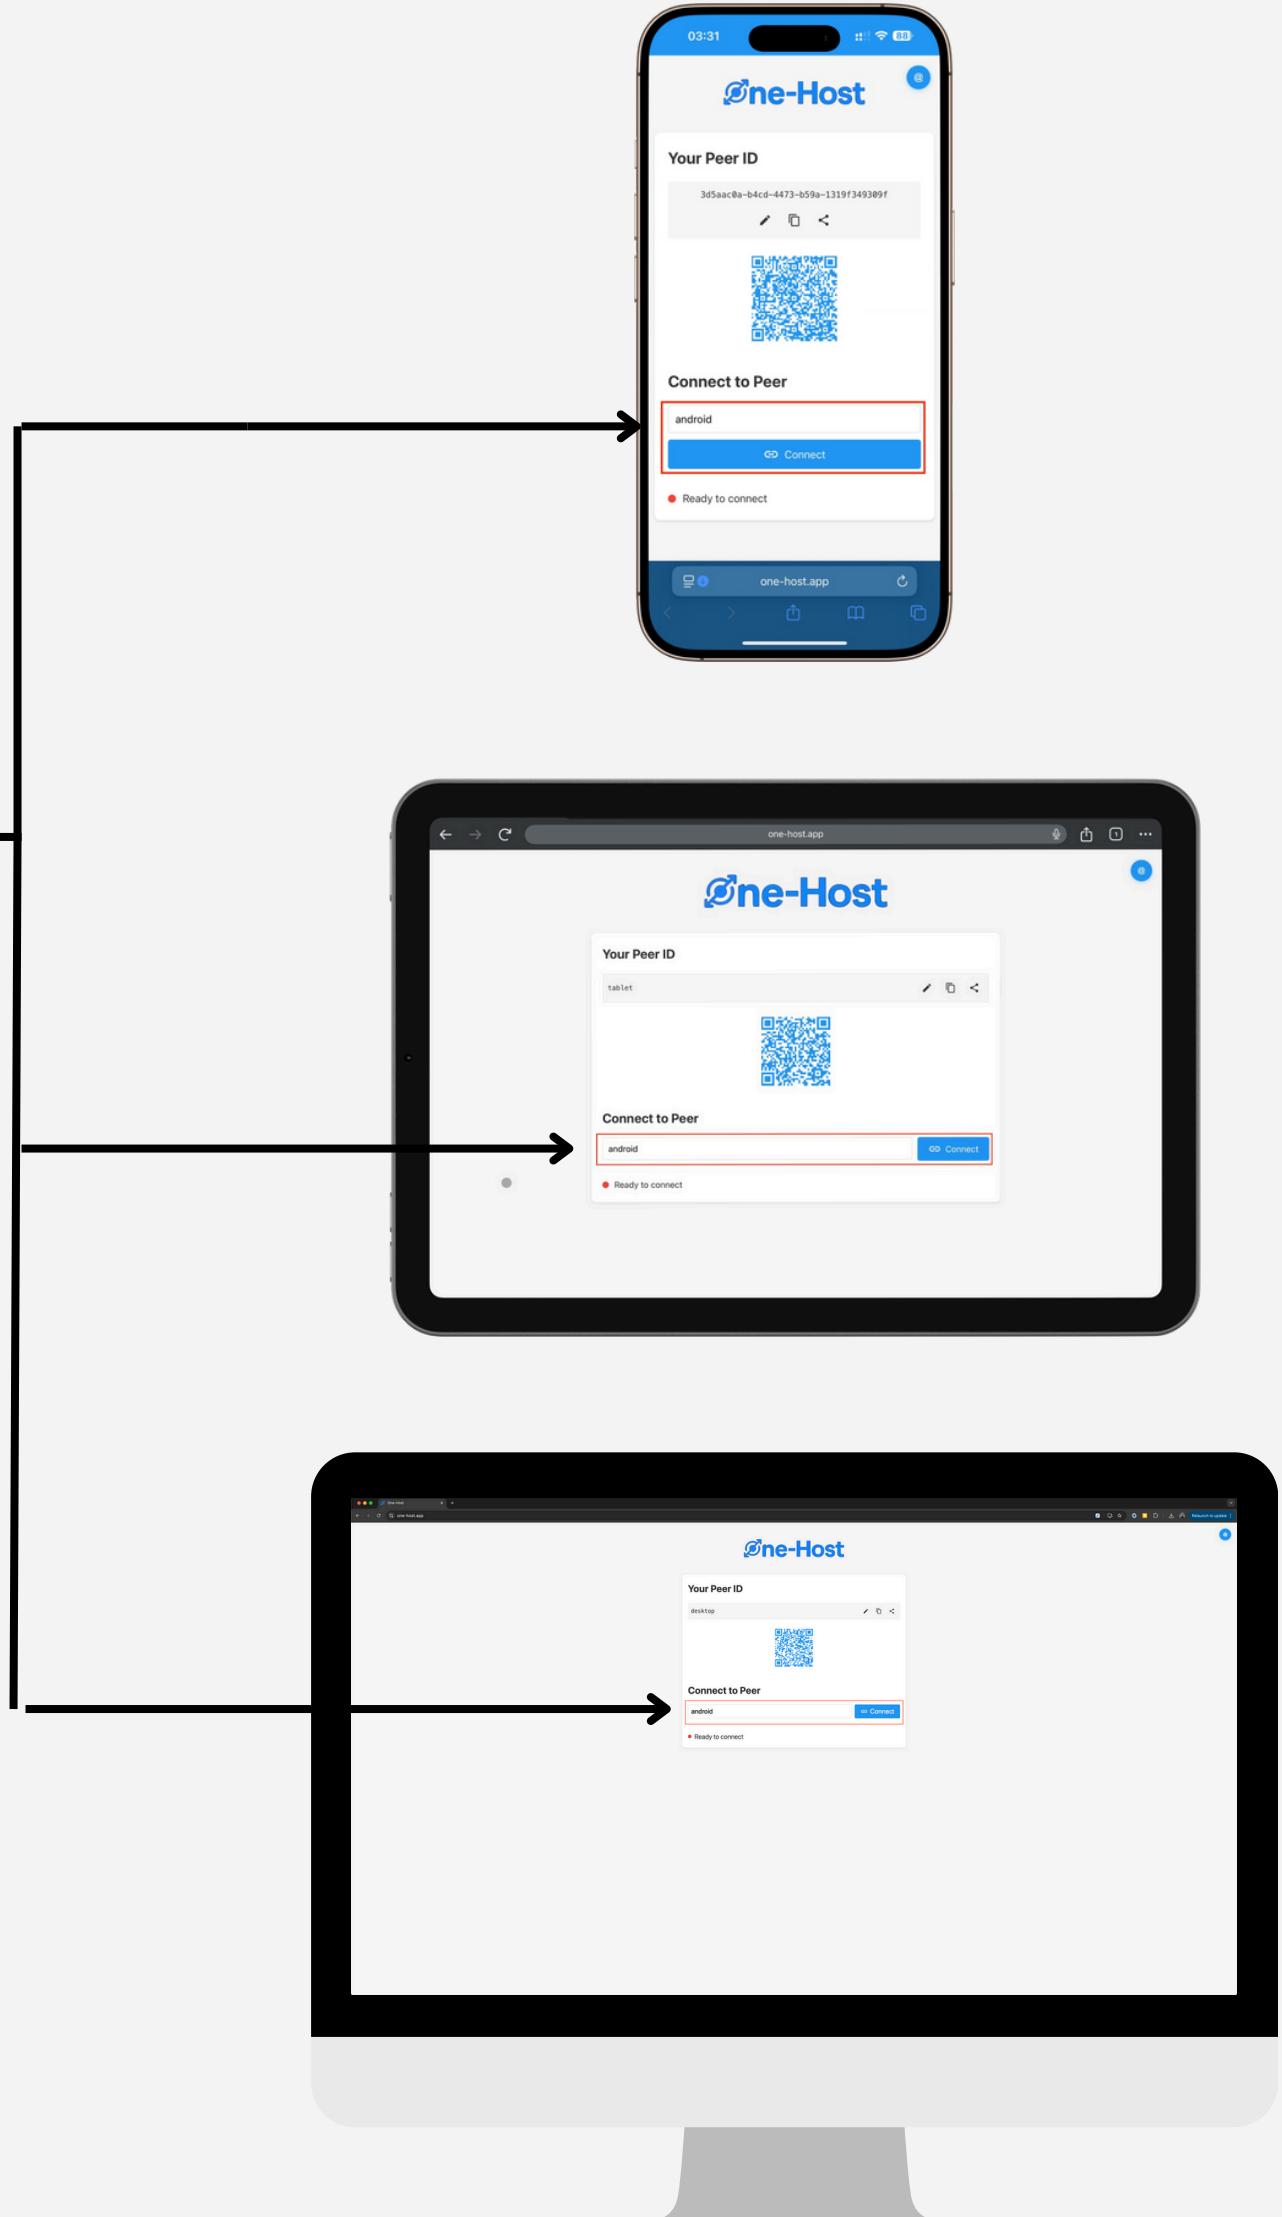

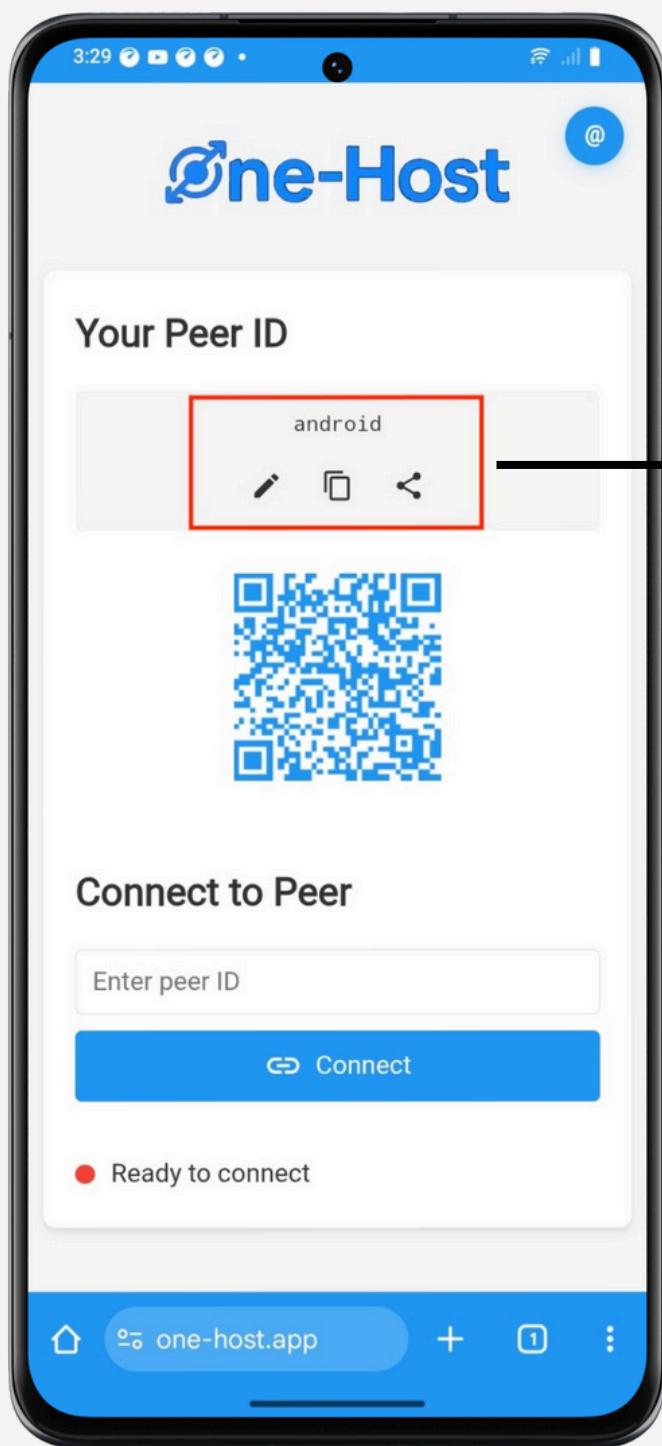

On each connected device, open your browser and type:  
**one-host.app** in the address bar. Opened web app will look  
like this

Peer ID

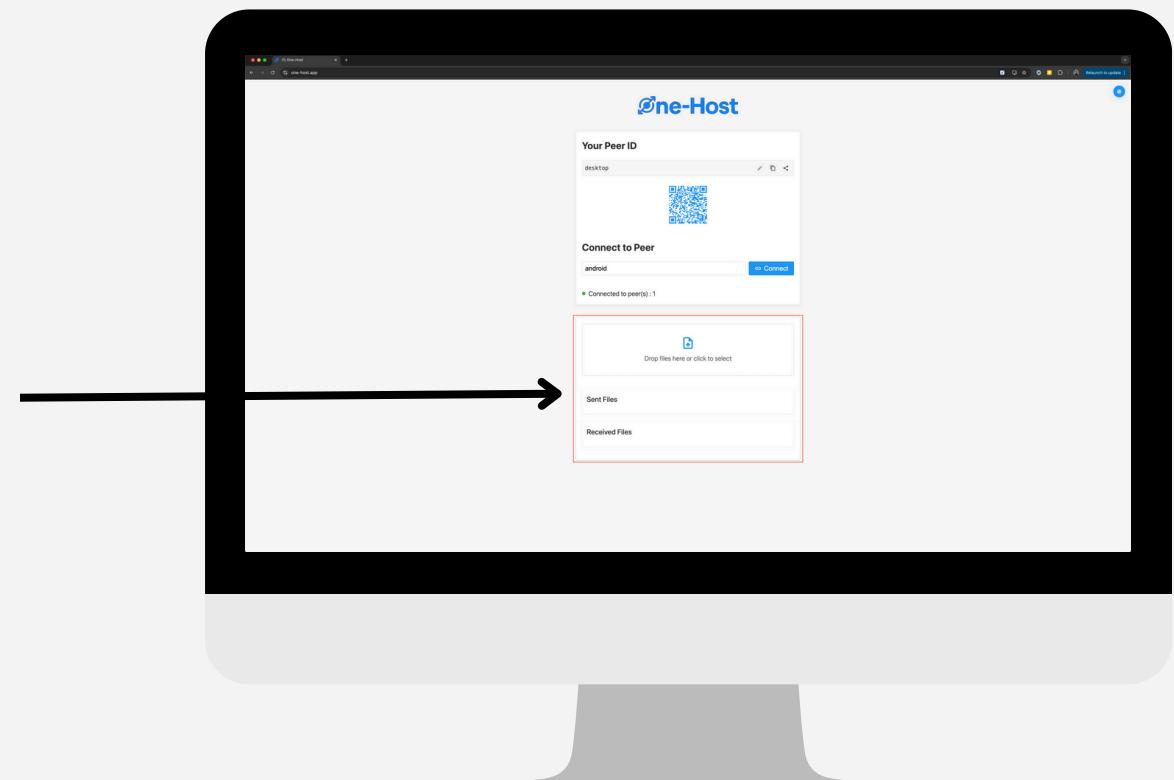

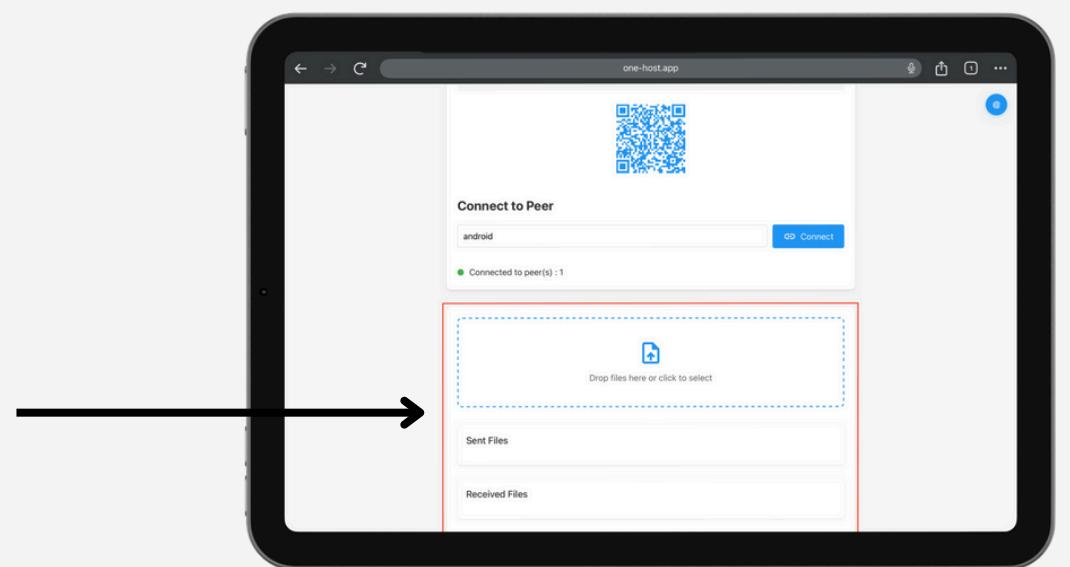

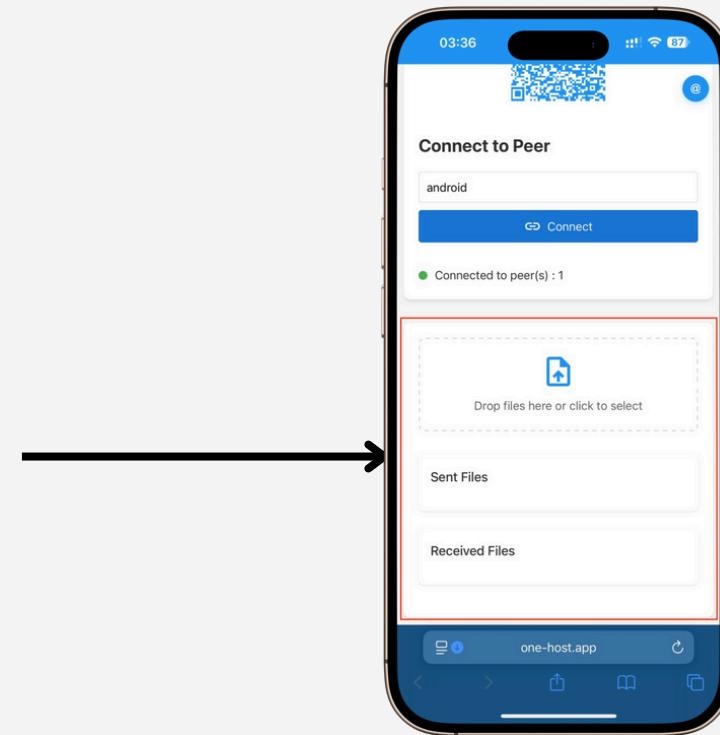

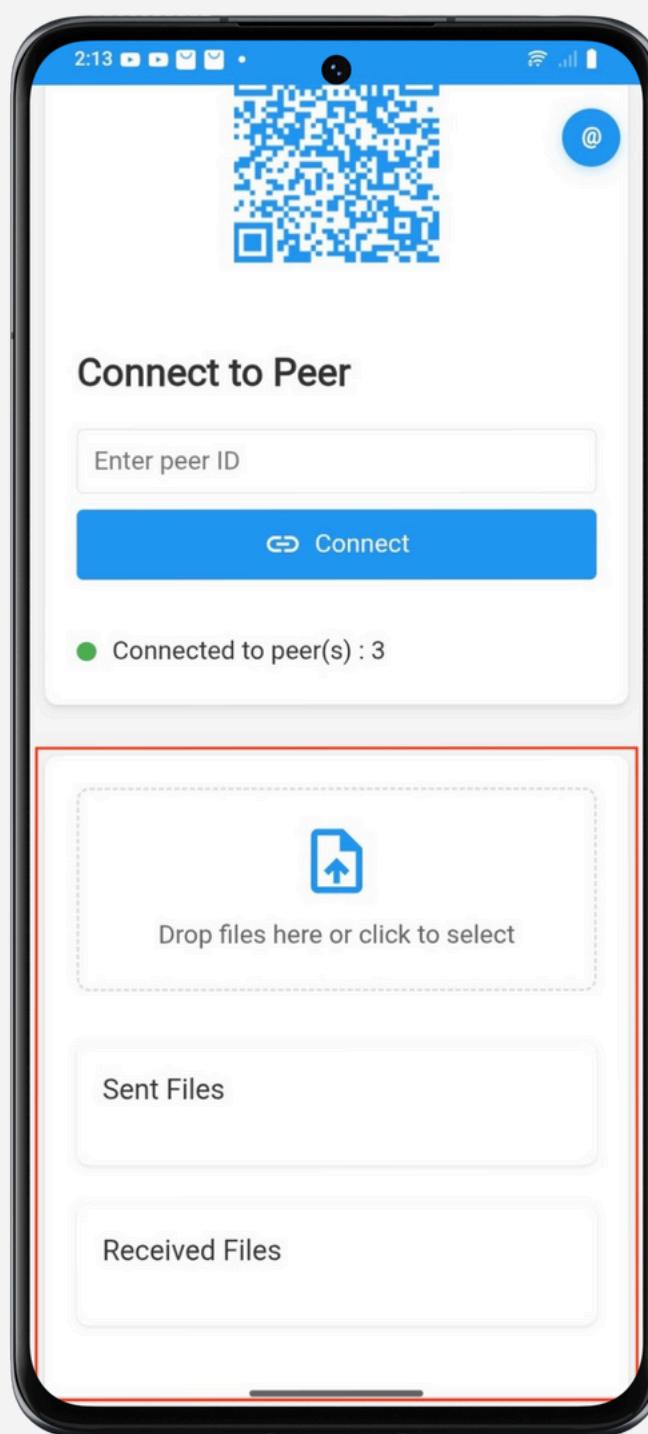

Enter one device's Peer ID on the other devices,  
then press 'Connect'

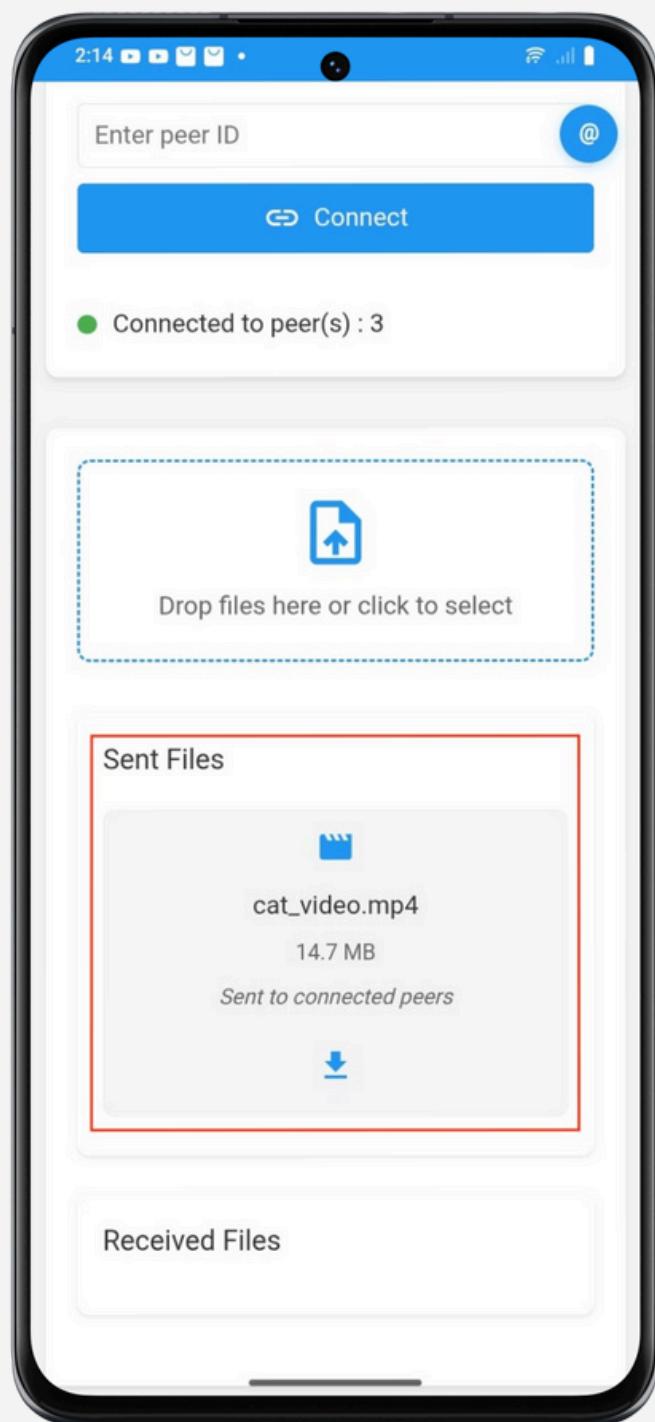

# File transfer section shows up on all connected devices after successful peer connections

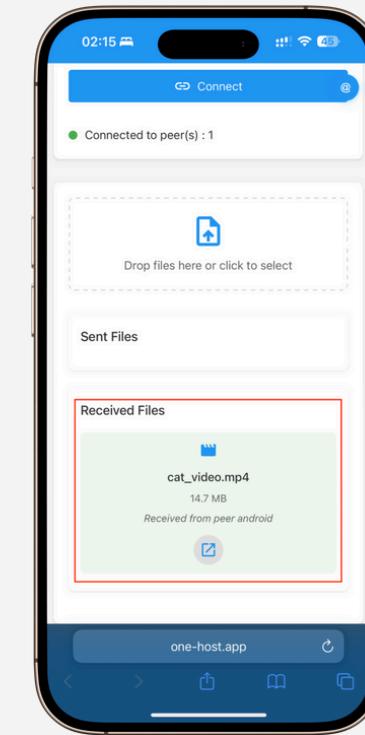

# Share files from one device to every device on the same network

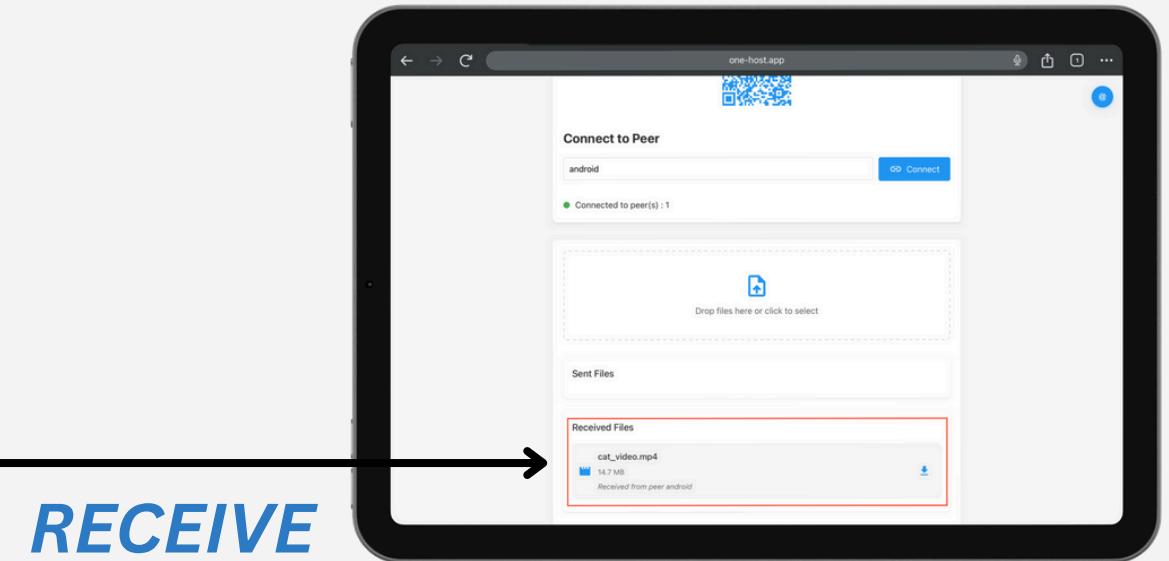

SEND

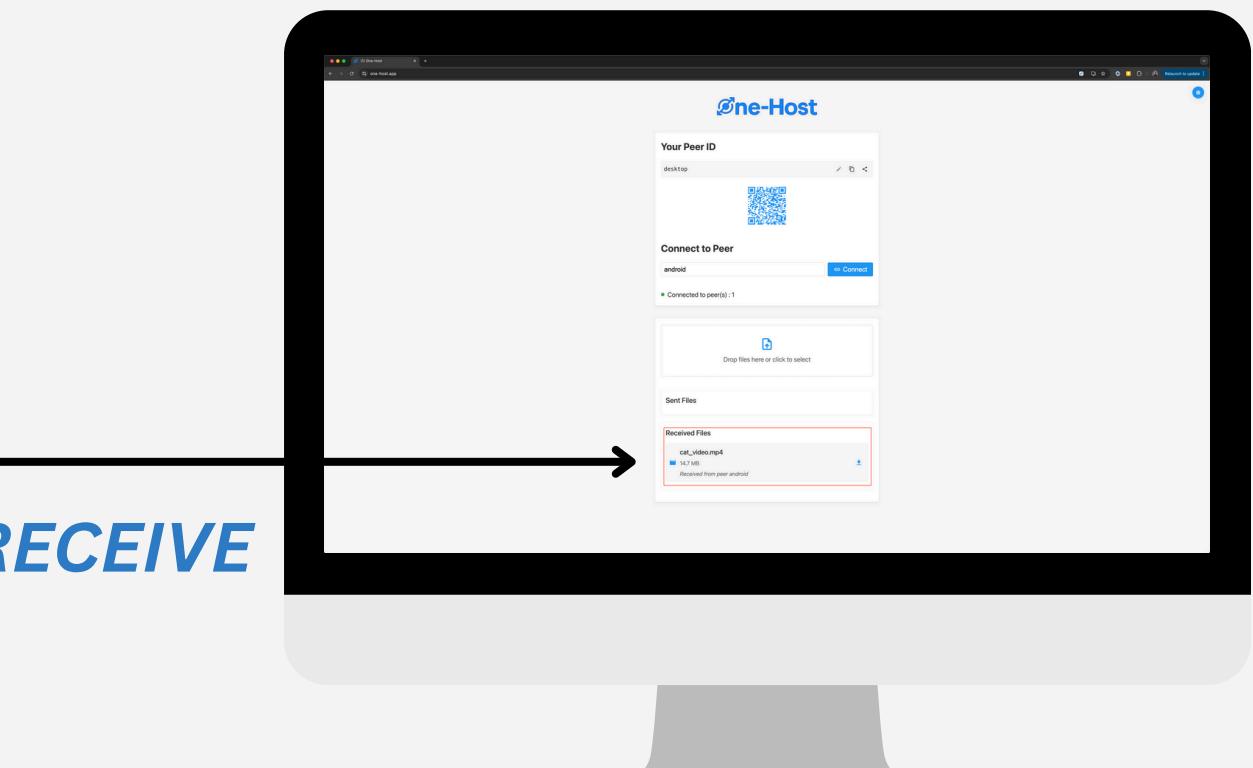

RECEIVE

RECEIVE

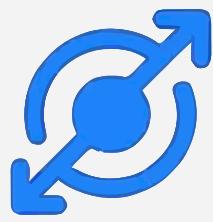

RECEIVE

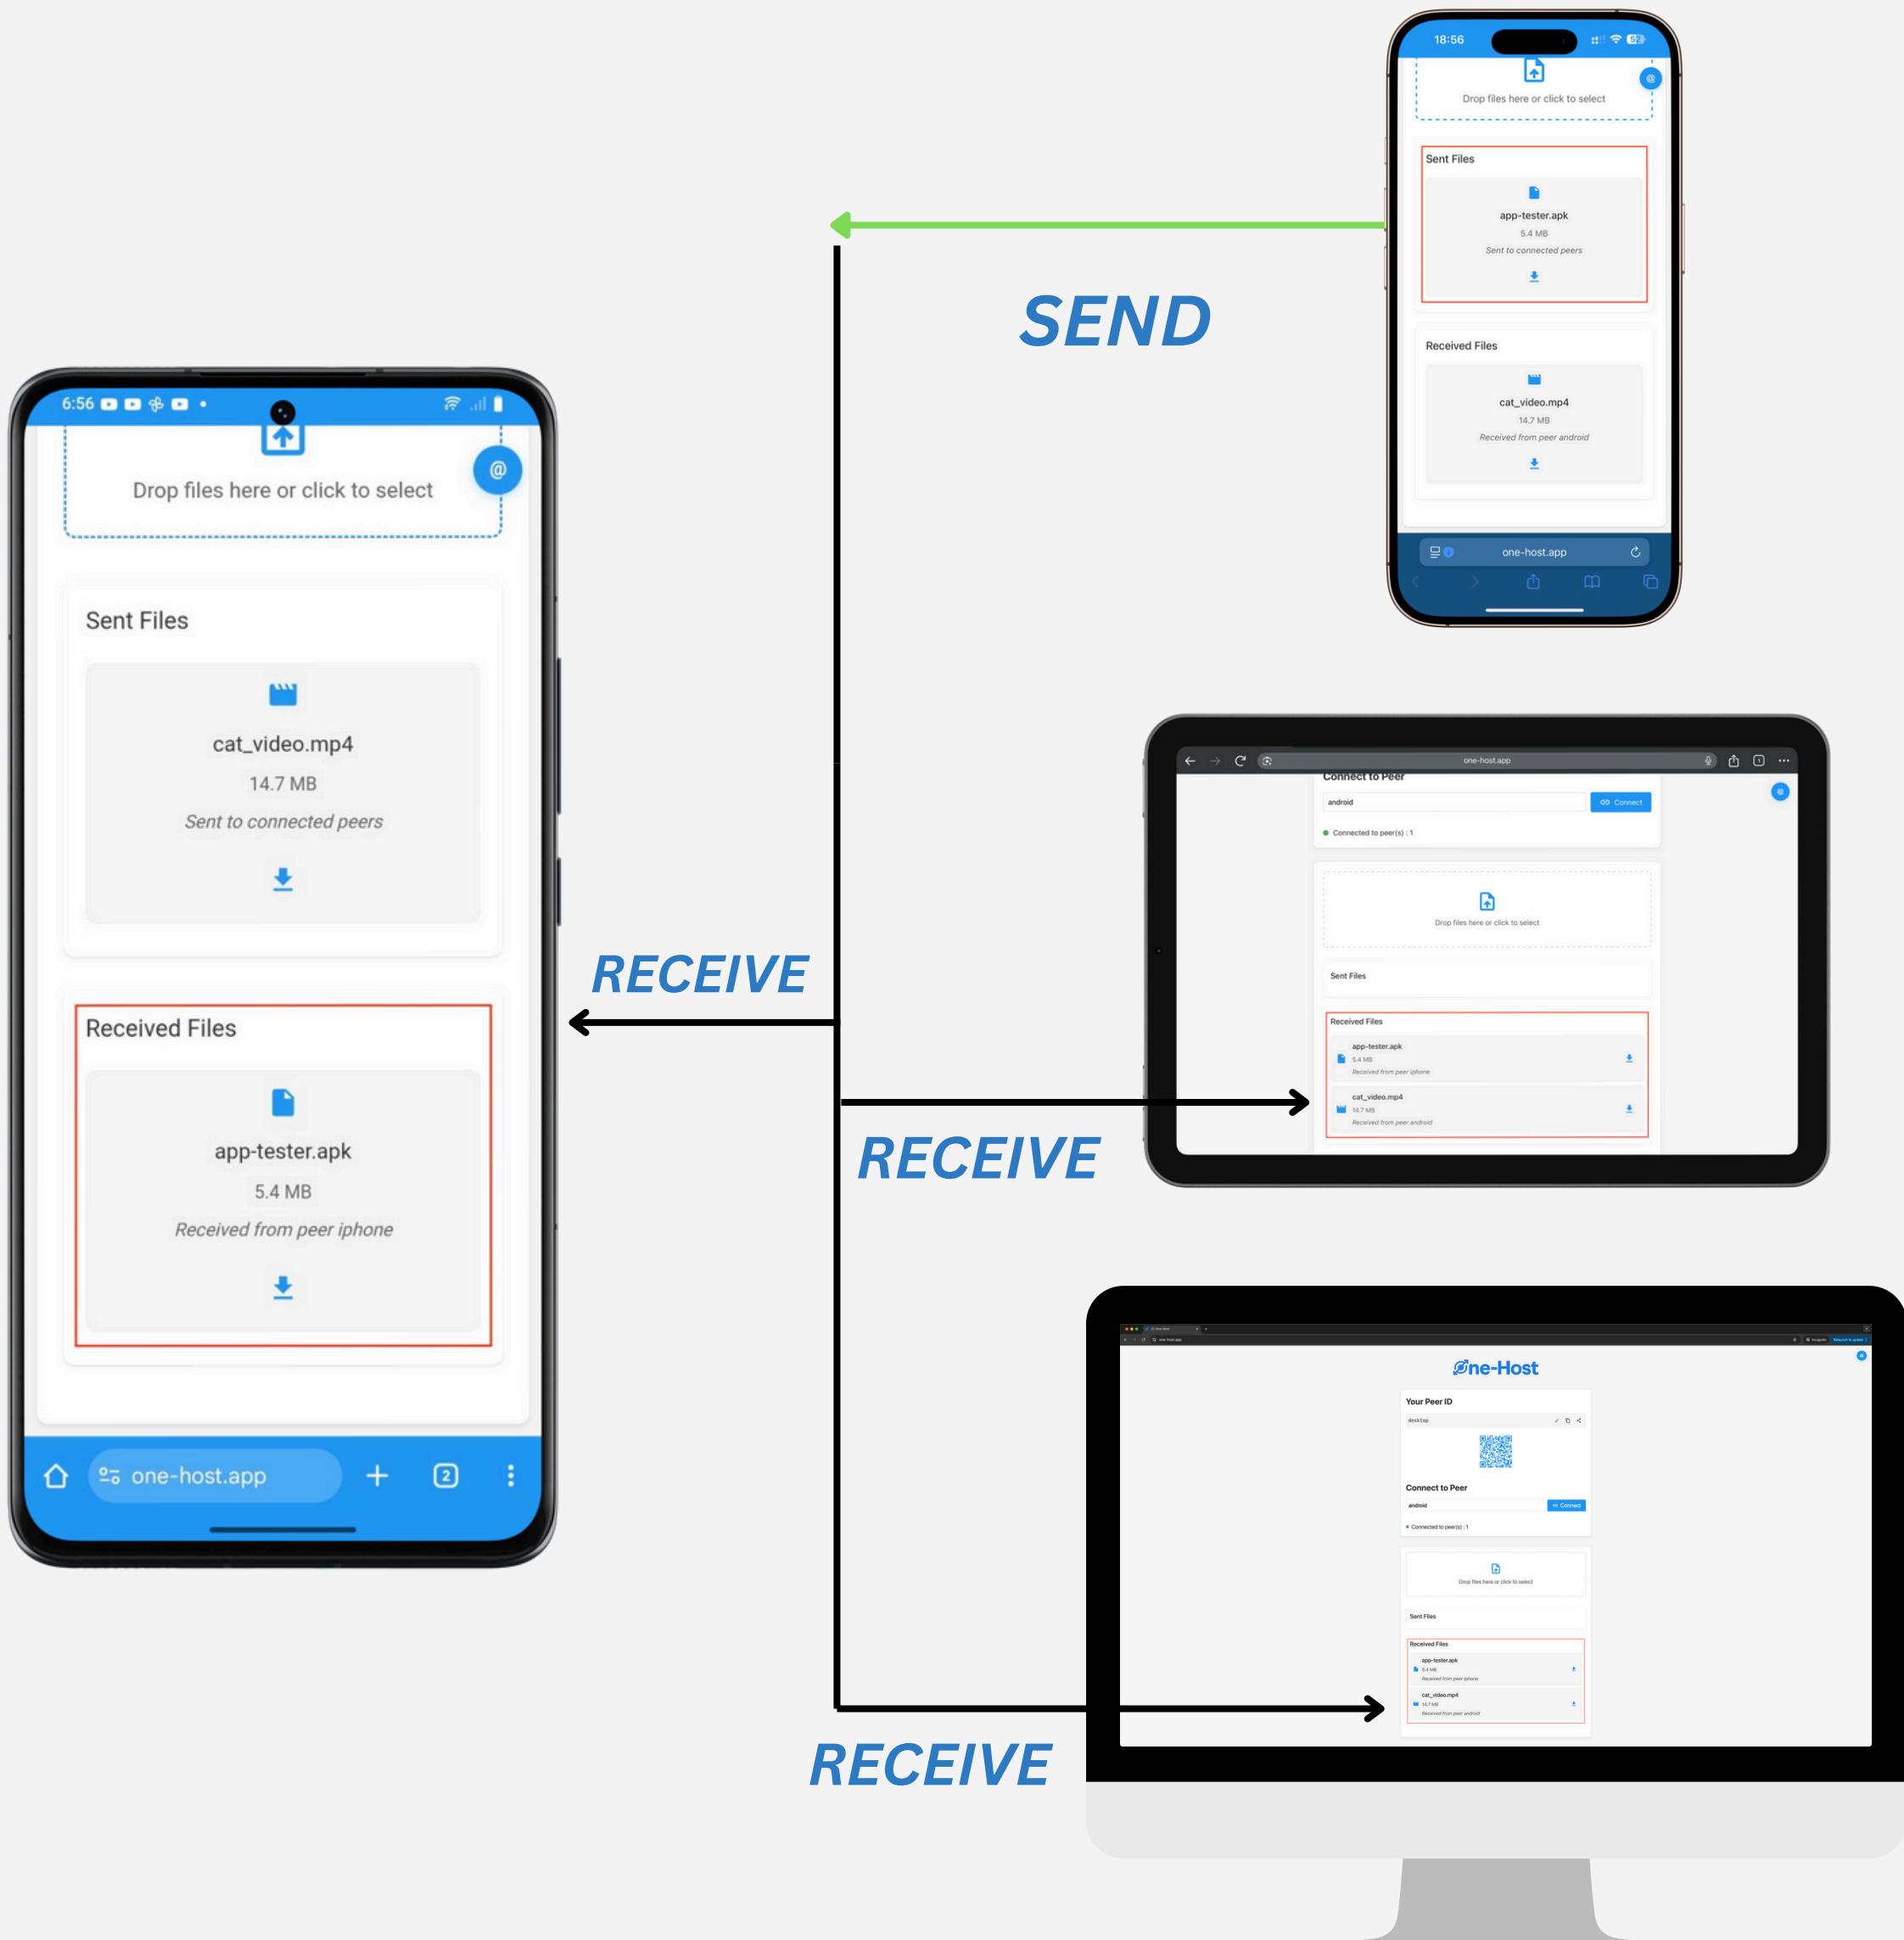

Share from receivers too

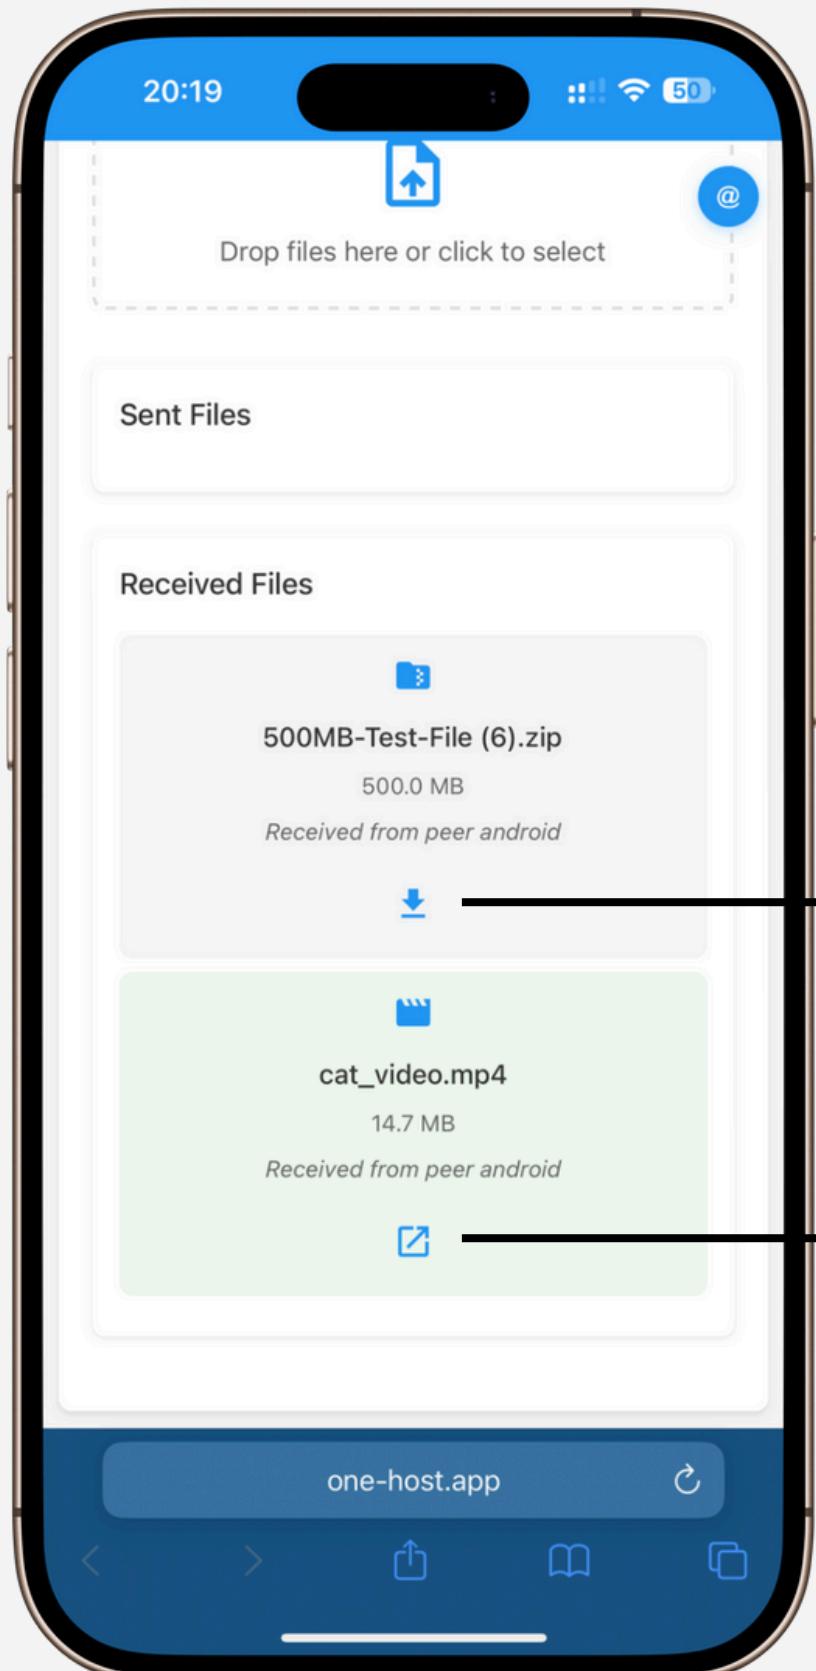

# Sharing works both ways – even from the receivers

Download on demand & open ↲

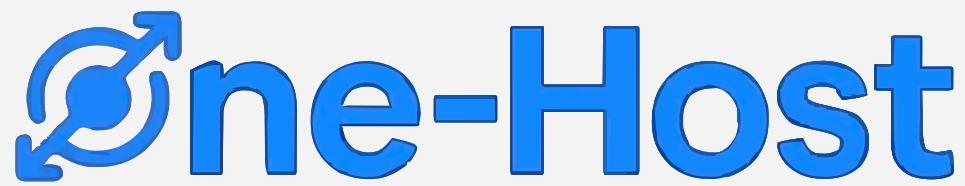

Download → Open → Done

**Download only when you need.  
A file is saved to your device  
only after you click download  
— so no storage space is wasted**

**Open the downloaded file in a  
new tab. If it doesn't work in  
your browser, just open it from  
your device's File Manager. This  
makes the file access quick**

## Troubleshooting

**In case of any unexpected behavior, persistent or not.  
Open one-host.app in a new tab and / or try clearing the  
browser cache.**

**Maximum size / transfer speed of a file is dependent on  
the types of browsers and hardware capacity of the  
devices.**

## Support

**Send in your queries, feedback, suggestions to:**
